

Contact NuLab today to find out how we can turn your old lab into a new lab

Laboratory Refurbishment

NuLab specialise in the refurbishment of existing laboratories globally with clients that include Apache, Baker Petrolite, Maersk FPSO's, Marathon and Talisman. NuLab personnel have gained an unrivalled track record through design, refurbishment and start up of laboratories worldwide since 1993.

As a result of field life extensions and the need to update older facilities, NuLab can ensure your lab meets the latest safety regulations and provides a safe and efficient place of work, NuLab specialists can design your laboratory refurbishment around standard laboratory units or alternatively work with our own specialist fabricators to design custom built cabinetry to make best use of the space available – critical in smaller modular laboratories.

We can provide joiners, floor layers, electricians and all trades necessary to guarantee the success of your refurbishment. Therefore we are in a unique position to add value by providing advice and guidance on laboratory refurbishment based upon up to date and extensive current experience.
